**DESCRIPTION**

Sika MaxTack® Ultra is a 1-component, solvent-free high tack adhesive with high load capacity.

**USES**

Sika MaxTack® Ultra is designed for the indoor and outdoor bonding of various objects in and around houses such as cable channels, acoustic tiles, door sills, mirrors, construction materials, roof and wall coverings and cover plates. Sika MaxTack® Ultra adheres well to concrete, mortar, clinker, fiber cement, natural stone (e.g. granite), glazed and unglazed ceramic, wood, metal (galvanized and stainless steel, aluminum) and various types of plastics.

**CHARACTERISTICS / ADVANTAGES**

- Powerful initial tack
- Fixing without tapes, nails or screws
- Very good adhesion to many substrates
- High load capacity
- Good workability
- Shrinkage-free hardening

**APPROVALS / STANDARDS**

- Émissions dans l’air intérieur A+

APPLICATION INSTRUCTIONS

For the application of Sika MaxTack® Ultra all standard construction guidelines apply.

SUBSTRATE PREPARATION

The substrate must be clean, dry, sound and homogeneous, free from oils, grease, dust and loose or friable particles. Paint, cement laitance and other poorly adhering contaminants must be removed. Sika MaxTack® Ultra adheres without primers and/or activators. However, for optimum adhesion and critical, high performance applications, such as on multi-story buildings, highly stressed joints, extreme weather exposure or water immersion, the following priming and/or pre-treatment procedures shall be followed:

Non-porous substrates
Aluminium, anodised aluminium, stainless steel, PVC, galvanised steel, powder coated metals or glazed tiles have to be cleaned and pre-treated using Sika® Aktivator-205, wiped on with a clean towel. Before sealing, allow a flash-off time of > 15 minutes (< 6 hours). Other metals, such as copper, brass and titanium-zinc, also have to be cleaned and pre-treated using Sika® Aktivator-205, wiped on with a clean towel. After the necessary flash-off time, use a brush to apply Sika® Primer-3 N and allow a further flash-off time of > 30 minutes (< 8 hours) before sealing the joints.

Porous substrates
Concrete, aerated concrete and cement based renders, mortars and bricks shall be primed using Sika® Primer-3 N applied with a brush. Before sealing, allow a flash-off time of > 30 minutes (< 8 hours).

For more detailed advice and instructions please contact our Technical Service Department.

Note: Primers are adhesion promoters. They are neither a substitute for the correct cleaning of a surface, nor do they improve the strength of the surface significantly.

CLEANING OF TOOLS

Clean all tools and application equipment immediately after use with Sika® Remover-208. Once cured, residual material can only be removed mechanically.
LIMITATIONS

• For good workability, the adhesive temperature shall be +20 °C.
• For proper curing of the adhesive, sufficient ambient humidity / moisture is necessary.
• Before bonding, check adhesion and resistance of paints and coatings by carrying out a trial.
• Trials shall be carried out to test for overpaint ability and paint compatibility. When over-coating Sika MaxTack® Ultra, compatibility of coatings must be tested individually.
• Colour variations may occur due to exposure to chemicals, high temperatures and/or UV-radiation (especially with white colour shades). However, a change in colour is purely of aesthetic nature and does not adversely influence the technical performance or durability of the product.
• Do not use Sika MaxTack® Ultra on bituminous substrates, natural rubber, EPDM rubber or on any building materials which might bleed oils, plasticizers or solvents that could attack the sealant.
• Do not use on polyethylene (PE), polypropylene (PP), polytetrafluoroethylene (PTFE / Teflon), and certain plasticized synthetic materials (pre-trials shall be carried out or contact our Technical Service Department).
• Before using Sika MaxTack® Ultra on natural stone, please refer to our Technical Service Department for advice.
• Do not expose uncured Sika MaxTack® Ultra to alcohol containing products as they may interfere with the curing reaction.

BASES OF PRODUCT DATA

All technical data stated in this Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

LOCAL RESTRICTIONS

Please note that as a result of specific local regulations the declared data and recommended uses for this product may vary from country to country. Please consult the local Product Data Sheet for the exact product data and uses.

ECOLOGY, HEALTH AND SAFETY

For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Safety Data Sheet (SDS) containing physical, ecological, toxicological and other safety-related data.

LEGAL NOTES

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika’s current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika’s recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product’s suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
